DTP T FB 332 and DTP T FB 232 • Setup Guide

This guide provides instructions for an experienced installer to install either the Extron DTP T FB 332 or the DTP T FB 232 switching transmitter into an Ackermann GB3 (OBO-Betterman), MK Electric CableLink Plus Modular, MK Electric CableLink Plus Single Pan, ElectraPlan, or PUK floor box and to make all connections.

The transmitters switch between one analog video and one digital (HDMI) video input and, paired with a compatible receiver, can extend the selected signal up to 330 feet (100 m) (DTP T FB 332) or 230 feet (70 m) (DTP T FB 232).

Installation

Planning

**CAUTION:** Failure to check these items may result in personal injury or property damage.

**ATTENTION:** La non-vérification des éléments listés ci-dessous peut provoquer des blessures ou dommages matériels.

Check that the installation meets the building, electrical, and safety codes.

Mounting and Cabling

**Step 1 — Preparing the floor box**

a. Install the floor box as directed by the manufacturer.

**NOTE:** Run all required cables and secure them with cable clamps.

b. Turn off or disconnect all equipment power sources.

**Step 2 — Installing adapters**

a. Determine a position in the floor box to mount the DTP T FB unit (see the image at right).

b. Identify the applicable adapter plates for the floor box (see the table below).

c. Install adapter plates to the same pair of mounting slots (see the table below for slot recommendations) for the same position in the floor box. Slide the top flange into the mounting slot and rotate the adapter plate down so the bottom flange rests against the wall of the floor box.

Step 3 — Make side panel connections under the adapter plates and set the TP function switch

A Power (see figure 1 on page 1) — Connect the included 12 VDC power supply to either unit, transmitter or receiver, as shown at right. Use the included tie-wrap to strap the cord to the captive screw connector.

Connect an IEC power cord between the power supply and a 100-240 VAC, 50-60 Hz source.

**NOTE:** If the TP switch (C) is in **DTP**, one power supply can power both units.
If the switch is in **HDBT**, each unit requires its own power supply.

B Remote RS-232 port — For serial RS-232 control, connect a host device or control system to the 3.5 mm, 3-pole captive screw connector. The wiring and protocol are shown at right.

C TP function switch —

If the receiving device is in the Extron DTP series, set this switch to **DTP**. The TP output consists of HDMI with embedded audio, analog audio, RS-232 and IR, and remote power. The transmitter and receiver can be powered by one 12 VDC power supply connected to either unit.

For an HDBaseT-enabled receiver type, set this switch to **HDBT** position. The TP output consists of HDMI with embedded audio plus RS-232 and IR. The transmitter and receiver each requires its own 12 VDC power supply.

**ATTENTION:**
- Position this switch **BEFORE** connecting the appropriate device to the TP connector. Failure to comply can damage the endpoint.
- Positionnez le sélecteur **AVANT** de connecter l’appareil approprié au connecteur TP. Ne pas respecter cette procédure pourrait endommager le point de connexion.

D Out port — Connect the Out (RJ-45) port to the DTP In port on the receiver. Extron recommends that you terminate both cable ends in accordance with the following, at a minimum: TIA/EIA T 568B and 24 AWG, solid conductor, shielded cable with 400 MHz bandwidth.

**ATTENTION:**
- Do not connect this connector to a computer data or telecommunications network.
- Ne connectez pas ces port à des données informatiques ou à un réseau de télécommunications.

Signal LED indicator — Lights when the device is transmitting a video signal or a test pattern.

Link LED indicator — Lights when a valid link between a DTP or HDBT input and output is established.

Step 4 — Mount the unit in the floor box

a. Place the DTP T FB unit in the desired position in the floor box so that the side panel connectors face towards the opening of the floor box.

**ATTENTION:**
- Ensure there is enough space between the top panel connectors and the lid of the floor box so the lid fully closes.
- Assurez vous qu’il y ait assez d’espace entre les connecteurs du panneau supérieur et le couvercle du boîtier de sol afin que celui-ci puisse se fermer entièrement.

b. Using the provided self-threading screws, secure the DTP T FB unit to the adapter plates (see figures 2 through 5).
Step 5 — Make side panel connections above the adapter plates

- HDMI input port (see figure 1 on page 1) — Connect an HDMI cable between this port and the HDMI output port of the digital video source.

**NOTE:** See the LockIt® Lacing Brackets on page 4 of this guide to securely fasten the HDMI connector to the transmitter.

- VGA Input 1 port — Connect a VGA cable between this port and the VGA output port of the analog video source.
DTP T FB 332 and DTP T FB 232 • Setup Guide (Continued)

Step 6 — Make top panel connections

Audio input (see figure 1 on page 1) — Connect an unbalanced stereo audio source to this 3.5 mm mini stereo jack for an analog audio input.

**NOTE:** Analog input audio is not embedded in the HDMI signal; it is transmitted separately and is present for any selected input.

RS-232 and IR connector — To pass serial or infrared data or control signals on the Over DTP RJ-45 output, connect the controlling device to the transmitter via the RS-232 and IR captive screw connector. Connect the device to be controlled to the receiver.

Configuration port — Plug a PC or other controlling device into the switching transmitter via this top panel mini-USB connector for remote configuration of the switching transmitter.

Reset button — This button initiates two levels of reset. See the DTP T FB 332 and DTP T FB 232 User Guide, available at www.extron.com, for details.

**Operation**

After all connected devices are connected and powered on, the system is fully operational. The DTP T FB unit can be configured and controlled using Extron Simple Instruction Set (SIS) commands (see the DTP T FB 332 and DTP T FB 232 User Guide available at www.extron.com).

**Indicators (K, see figure 1)**

- **Power LED** — Lights when power is applied.
- **HDMI LED** — Lights when the HDMI input signal is detected.
- **VGA LED** — Lights when the VGA input signal is detected.
- **HDCP LED** — Lights when the HDMI input signal is encrypted.
- **Auto LED** — Lights when device is in auto switch mode. Auto switch is on by default.

When auto switch is on, the switcher automatically selects the input, HDMI or VGA, that has a valid signal present. When signals are present on both inputs, the switcher selects VGA.

**NOTE:** Auto switch mode can be toggled off and on using the SIS commands. Issue the **E**n AUSW{SIS command, where **n** = 0 (off) or 1 (on). The switcher responds with Ausw{n}. See the DTP T FB 332 and DTP T FB 232 User Guide, available at www.extron.com, for details.

**LockIt® Lacing Brackets**

Use the included LockIt Lacing Brackets to securely fasten the HDMI cable as follows.

1. Plug the HDMI cable into the panel connection.
2. Loosen the HDMI connection mounting screw from the panel enough to allow the LockIt lacing bracket to be placed over it. The screw does not have to be removed.
3. Place the LockIt lacing bracket on the screw and against the HDMI connector, then tighten the screw to secure the bracket.

**ATTENTION:**

- Do not overtighten the HDMI connector mounting screw. The shield it fastens to is very thin and can easily be stripped.
- Ne serrez pas trop la vis de montage du connecteur HDMI. Le blindage auquel elle est attachée est très fin et peut facilement être dénudé.

4. Loosely place the included tie wrap around the HDMI connector and the LockIt lacing bracket as shown.
5. While holding the connector securely against the lacing bracket, use pliers or similar tools to tighten the tie wrap, then remove any excess length.
